

VitroScreen Research awarded: Best Poster IFSCC 2019

The International Organizing Committee has awarded as **best poster of IFSCC 2019** VitroScreen's poster entitled: *New insights on the role of adipose tissue by using 3D scaffold free organoids* by Francesca Rescigno, Francesco Carriero and Marisa Meloni

The potential applications of adipose microtissues have been recognized as transversal in different industrial fields, including cosmetic, pharmaceutical and nutritional sectors.

Since 2011 VitroScreen has been investing in microtissues technology and different microtissues models have been developed for active screening and mechanism of action identification.
